Improving multilingual communication between Nurses and Patients

___

您有疼痛感？

The biggest challenge between a medical professional and a patient who do not share a common language is obviously the language barrier.
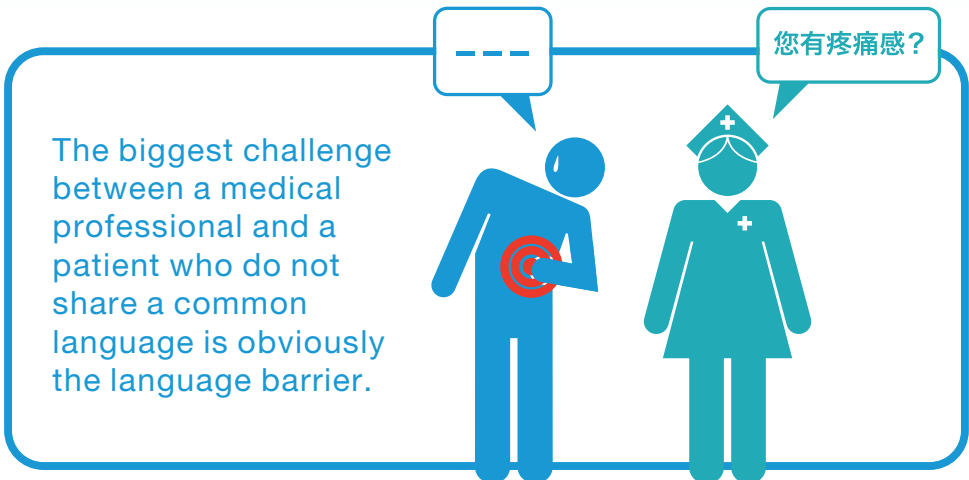

UniversalNurses is a project that will facilitate multilingual communication between Nurses and Patients who do not share a common language.

UniversalNurse Speaker (UNS) is a well thought-out multilingual application that will enable a Nurse to select a preferred language and a medical topic in order to improve multilingual communication with patients from any background.
